CS graduate who came back to software through AI-assisted development: built an ordering app used by 80+ hospital night-shift staff, then merged 35 pull requests into a live operations platform as a contract developer.

EXPERIENCE

Contract Developer, Sandy Vans / Solid Wood Worx — Jul 2026 - Present

- Built the Solid Wood Worx staff app in TypeScript (Hono, htmx) inside the platform, with a floor board, live Shopify order views and a checklist generator converted from my own Python tool
- Reconciled the shop's build rules on the floor as 48 numbered questions, then validated the tool by generating a sheet that matched the checklist maintainer's hand-built sheet line for line and exposed two catalog defects
- Built a per-branch preview service where a non-technical stakeholder points at an element and leaves a one-sentence note, with read access to the live platform limited to an allowlisted GET-only proxy that keeps the credential server-side
- Merged 35 pull requests into a live shop-operations platform shared with other developers, behind CI for types, lint, tests, secret scanning and schema checks

Food Service Partner, Scripps Health, Mercy Hospital San Diego — Jul 2021 - Mar 2026

- Independently managed all night-shift cafeteria operations: inventory, station setup and breakdown, food preparation, and service for 50+ staff across Emergency, Respiratory, EVS, and other departments
- 2025 Values in Action Honoree, Scripps Mercy Hospital San Diego

PROJECTS

CafeNightClub, Sole Developer — 2025 - 2026

- Built and shipped a production ordering system for 80+ night-shift hospital staff, with real-time order tracking over Supabase Realtime WebSockets
- Row-Level Security policies on every table, with role-based access (user, admin, owner) enforced server-side rather than only in the UI, and rate limiting on cart operations

WarmupTS, Sole Developer — 2026

- Published WarmupTS, an MIT-licensed TypeScript framework for CS2 gamemodes that hands every engine event to every plugin, so independent rules react to the same kill, with CI running lint, type checks and tests on every push without the game installed
- Built PistolGG, a free-for-all gun game for CS2 on that framework, and run it as the gamemode on a public CS2 server

SKILLS

Languages: Python, TypeScript, JavaScript, Bash, PowerShell, SQL, HTML, CSS

Frontend: React, Next.js, Astro, Tailwind CSS, DaisyUI, SSR, Responsive Design, Accessibility

Backend: Node.js, Bun, FastAPI, Hono, PostgreSQL, SQLite, Drizzle ORM, Supabase, better-auth, RESTful APIs, SSE, Linux (Ubuntu), Caddy, PM2

Tools & Practices: Git, GitHub, CI/CD (GitHub Actions), Tailscale, Vitest, pytest, Claude Code (1 year), Cursor, State Management, Database Design

AI & Search: Semantic search, Vector embeddings and reranking (Voyage AI), pgvector (HNSW), MCP tool servers, Multi-agent orchestration, Context engineering

EDUCATION

San Diego State University, Bachelor of Science in Computer Science — 2020

Grossmont College, Associate of Science in Mathematics / Computer Science — 2017
