Contract developer who turns what a client's staff define on screen into the backend underneath: where each record comes from and where it is stored. Before that, built an ordering app for a hospital's night-shift staff.

## EXPERIENCE

**Contract Developer**, Sandy Vans / Solid Wood Worx — Jul 2026 - Present

- Built the Solid Wood Worx staff app inside the platform with Claude Code (TypeScript, Hono, htmx), connecting the pieces end to end: an order's build checklists put its kits on a floor board, kits with CNC parts become jobs in the cut queue, and finished cuts return to the floor
- Defined how the CNC operator's Python pipeline exchanges data with the platform, each export posted as one cut list naming its nest, sheets and job and the cut queue read back, then fixed what a simulated run of the order-to-cut loop exposed, such as jobs closing as cut with no parts
- Took requirements in person over thirteen on-site days from July to September, reconciling build rules with the floor staff and walking each new screen with the people who asked for it
- Turned the shop's build rules into a register of numbered questions, 48 reconciled on the floor in July and 135 by October, and validated the tool by generating a sheet that matched the checklist maintainer's hand-built sheet line for line, exposing two catalog defects

**Food Service Partner**, Scripps Health, Mercy Hospital San Diego — Jul 2021 - Mar 2026

- Independently managed all night-shift cafeteria operations as its only staff member: inventory, station setup and breakdown, food preparation, and service for the hospital's entire night shift
- 2025 Values in Action Honoree, Scripps Mercy Hospital San Diego

## PROJECTS

**CafeNightClub**, Sole Developer — 2025 - 2026

- Built and shipped a production ordering system for a hospital's night-shift staff, with real-time order tracking over Supabase Realtime WebSockets
- Row-Level Security policies on every table, with role-based access (user, admin, owner) enforced server-side rather than only in the UI, and rate limiting on cart operations

**Grow Tent Telemetry**, Sole Developer — 2026

- Built and ran, with Claude Code, a 24/7 monitoring, alerting and control system for an indoor grow tent, with a Raspberry Pi at the tent as the sole sensor reader and a remote server holding the durable record and dashboard
- Reverse engineered the controller's Bluetooth LE protocol by decompiling the vendor's Android app
- An LLM tool call reaches hardware only by enqueuing a command onto the same guarded queue an operator uses, with the tool boundary validating shape only and the executor staying the authority on range and policy

## SKILLS

**Languages:** Python, TypeScript, JavaScript, Bash, PowerShell, SQL, HTML, CSS

**Frontend:** React, Next.js, Astro, Tailwind CSS, SSR, Responsive Design, Accessibility

**Backend:** Node.js, Bun, FastAPI, PostgreSQL, better-auth, RESTful APIs, SSE, Linux, Caddy

**Tools & Practices:** Git, GitHub, CI/CD (GitHub Actions), Tailscale, pytest, Claude Code (CLI), Row-level security, Schema design and migrations

**AI:** MCP tool servers, LLM tool-call guardrails, Agent skills, hooks and plugins, Context engineering

## EDUCATION

**San Diego State University**, Bachelor of Science in Computer Science — 2020

**Grossmont College**, Associate of Science in Mathematics / Computer Science — 2017
